The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:

☐ the entire international application

☒ claims Nos. 23-25

because:

☒ the said international application, or the said claims Nos. 23-25

the computer readable form ☐ has not been furnished

☐ does not comply with the standard

☐ the tables related to the nucleotide and/or amino acid sequence listing, if in computer readable form only, do not comply with

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	<u>1-22</u>	YES
	Claims		NO
Inventive step (IS)	Claims	<u>1-22</u>	YES
	Claims		NO
Industrial applicability (IA)	Claims	<u>1-22</u>	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

The claims relate to tumour targeting units and their use.

The following documents were found:

A US 5981478

B US 5622699

C WO 0244215

Document A describes integrin binding peptides.

Document B relates to a method of identifying a molecule that homes specifically to one or a few selected organs, like the brain and the kidney. The molecules can be used to direct a moiety to the selected organ. They can be linked to labels and pharmaceuticals to use in the treatment of cancer (see columns 12-13). However, the organ specific peptides have not been shown to be tumour targeting. Peptide no. 3, that resembles the claimed peptides is described as a brain homing.

Document C discloses a binding molecule comprising one or more polypeptides which form a binding site capable of binding a target molecule and an Fc effector peptide.

Thus, the documents show the general state of the art.

Claims 1-22 are considered to fulfil the requirements of novelty, inventive step and industrial applicability.
